

SPRAY-TOP SYSTEM

Stamped concrete and other concrete surfaces may have been difficult to restore in the past, but not anymore!

- Re-Colours stamped concrete without changing existing pattern or texture of surface
- Can be antiqued/acid stained
- Repairs smooth or broom finished concrete
- Works easily with stencils
- Can be applied to vertical surfaces

The Spray-Top System is your choice when renewing the colour or surface of existing concrete. It is applied in the same manner as paint, so that the existing texture is preserved under one application.

Spray-Top polymer coating is a revolutionary product that restores old, stained concrete to a like new appearance. The versatility of the Spray-Top product allows it to be sprayed as a decorative finish consisting of many colours and shades or as a solid colour. Once dry, the Spray-Top application looks similar to a professionally-finished hardener or coloured concrete job.

Unlike ordinary concrete, Spray-Top polymer cement can be applied in any colour and can be applied over decorative Modello patterns and designs to create beautiful borders, tiles and medallions on concrete floors and other surfaces.
